

# VOLER

NEW FOR 2026

## Heat Transfer Logo Garments

Easily add your logo to bottoms with our high-quality heat transfers, available on the following styles. For full details, see our [Heat Transfer Art Guide]

**Black Label Shorts, Bibs & Cargo**  
(Comp HP chamois)

**Super Bibs and Cargo Bib**  
(Comp HP chamois)

**Thermal Bottoms**  
(Paris chamois)

**\*Available in Peloton / Escape / Youth**

### Pro Shorts & Bibs

We've combined the best features of our Velocity and Pro bottoms to create our most advanced custom short yet. Bibs are available in two inseam lengths. **Comp HP and Black Nylon only.**

### Velocity Skinsuit

Featuring a lightweight Ventana fabric top and a solid bottom, this skinsuit includes Heat Transfer logo customization. Available in both short and long-sleeve, with three back pockets and a fully opening front. **Comp HP and Black Nylon only.**

### Pro Jersey

Crafted from our new lightweight Ventana fabric (100 GSM, 86% poly / 14% elastane), the Pro Jersey is streamlined for an enhanced race fit.

### Women's Crop Top

A new addition to our custom line, this women's technical top is crafted from lightweight Ventana fabric for exceptional performance and versatility.

# Thermal & Performance Updates

---

## **Fabric Upgrade // Atlas**

For 2026, the Classic Jersey, Cycling Cap, and Youth Jersey have all been upgraded from AMP to our more popular Atlas fabric, offering enhanced performance and comfort.

## **Thermal Jacket and Vest**

Made with a new combination of Tioga Thermal and ThermoFlex fabrics, these pieces are lighter weight yet equally warm. Fit improvements include a lower front collar and streamlined arm fabric.

## **Peloton Thermal Jersey**

Made with a new combination of Tioga Thermal and ThermoFlex fabrics, these pieces are lighter weight yet equally warm. Fit improvements include a lower front collar and streamlined arm fabric.

## **Express For Most Items & On Demand**

Re-Orders with a 10-15 day turnaround for **most** items.

## **WHAT ARE CUSTOM HEAT TRANSFERS?**

• Custom heat transfers are a specialized and highly effective method for personalizing cycling apparel. This technique is particularly well-suited for the high-performance fabrics we use in our shorts, bibs, and accessories. The process involves printing a team logo, a sponsor's branding, or a unique design onto a specialized transfer film. This transfer is then meticulously positioned on the garment and a high-temperature heat press is used to apply firm pressure. The heat and pressure activate a unique adhesive layer, seamlessly bonding the design to the synthetic fibers of the fabric. This results in a vibrant, durable, and flexible graphic that moves with the rider, ensuring the design doesn't crack or peel during intense activity.

## **WHY USE CUSTOM HEAT TRANSFERS?**

• Custom heat transfers allow for a simple, clean design that is perfect for those who value the "less is more" philosophy of a sleek, professional aesthetic. Transfers are used on solid fabrics, so the result is a rich, uniform look, as opposed to the grinning (lighter color compared to the dyed solid fabric) that occurs with sublimation.
